Dear Mr. and Mrs. Goldenhersh:

As you know, in July 1985 we collected samples of soil and dust on the property located at 8888 Hall Street, St. Louis, Missouri, to analyze for dioxin. This activity was part of our investigation of the site known as 8888 Hall Street - formerly Eastern Trucking. These samples were analyzed for 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) and the results are reported in parts per billion (ppb).

We now have all the results of all the samples complete and the quality of the analysis has been assured. The analysis of these samples did not detect 2,3,7,8-TCDD at the level of 1 ppb which has been recommended by the federal and state health agencies.

Based on these analytical results, we plan no further investigation for dioxin on this site. We will contact you if, at a later date, we learn of any new facts we think might warrant altering of the above decision.

We welcome any questions you may have and our first concern is that they are answered clearly and completely and that you have this factual information for your use. Questions may be directed to our toll free number, 1-800-892-5009.

Sincerely yours,

Carl V. Blomgren
